Travelling through Europe will be necessary

**Date for employment:** to be agreed with the candidate, May 2007 preferred

**Deadline for application:** 20 April 2007

The application should consists of CV and application letter in English

#### Context

According to Regulation 1228/2003/EC and the affiliated Guidelines a coordinated market-based, transparent and non-discriminating mechanism should be developed in order to allocate cross-border transmission capacity among market participants. Considering the special role of Transmission System Operators (TSOs) e.g. according to Directive 2005/89/EC concerning measures to safeguard security of electricity supply and infrastructure investment, any further development of congestion management has to respect TSOs' fundamental duty: the secure operation of European electric power system.

In order to get more precise physical representation of particular transactions' impact on load flows on interconnection tie-lines and following the Central Eastern Europe (CEE) regulators' request to investigate a load flow based cross-border transmission capacity allocation scheme, the TSOs intend to investigate and implement load flow based explicit coordinated auctions (Physical Transmission Right (PTR) auctions).

For this purpose a group of several TSOs within the CEE region agreed to establish a common auction office for CEE-Regions (CEE-AO) in Freising / Germany. This CEE-AO should act on behalf of the TSO-shareholders when allocating a cross-border capacity and providing settlement of such service.

## **Main tasks**

- Maintenance and development (improvement) of IT infrastructure ( software, hardware, telecommunication, power supply);
- Providing helpdesk
- IT services
- In house development of auction related development
- Constant continuing education and professional development
- Prototyping of software

## **Profile**

- A msc in electrical Engineering or Computer Science with recent involvement in Transmission System Operators (TSO) business. Msc in other field is also possible, but needs to be complemented by actual work experience on related issues;
- Knowledge of all aspects of energy supply
- Knowledge of energy market
- Open minded Innovative thinker
- Good inter-personal skills
